

DRAINAGE SOLUTIONS AND WATER TREATMENT /

PLATON

RUGGED, DIMPLED HIGH-DENSITY POLYETHYLENE MEMBRANE KEEPS FOUNDATIONS AND FLOORING DRY

Platon is a rugged, dimpled high-density polyethylene (HDPE) membrane that keeps foundations and flooring dry.

Platon Foundation Drainage keeps wet soil away from the foundation wall. Any moisture that may find its way past the membrane is carried to the foundation drain by the air gap drainage path.

Platon Flooring Protector isolates flooring from cold, damp concrete. When used beneath a wooden sub-floor and over concrete in a basement, it makes floors comfortable, odour free, healthy and dry.

Advanced technology

Creates an impermeable vapour barrier and air gap, allowing concrete to breathe while controlling moisture

Easy installation

No specialized training or equipment required, can be installed year-round

Performance

Solves problems associated with basement leakage, floor coverings on concrete and interior moisture control

TYPICAL APPLICATIONS

- Foundation waterproofing
- Flooring underlayment

“Up to 90% of Ottawa homebuilders choose Platon to protect their homes due to the incredible infallibility of the product - Zero failure - Zero call-backs!”

Dan O’Neill

President, Ottawa Structural Residential Services Ltd.

PLATON FOUNDATION DRAINAGE

Platon membrane keeps wet soil away from the foundation wall

Versatile

Used to waterproof block walls, poured concrete walls, permanent wood, existing foundations and Insulated Concrete Forms (ICFs)

Long-lasting

Walls can shift, crack and settle over the years without affecting Platon performance

Warranty

30-year product warranty

PLATON FLOORING

Platon membrane makes basements comfortable, healthy and dry

Comfort

Isolates the finished floor from the cold concrete so that it stays at room temperature

Functional

Can be installed with most floor-covering materials, including carpet, vinyl, laminate and hardwood

Healthy, dry air

Prevents musty odours, mould and mildew from entering basement living spaces
